SENG 4620 Team Charter

Oct 1, 2026 · @Ahsan

Who we are

We are a two-person team building the cloud infrastructure for Aura Digital Bank in SENG 4620, Fall 2026.

- **Team name:** [to decide]
- **Mascot:** [to decide]

Member	Student ID	Background
Ahsan Habib Niloy	T00719245	Full-stack JavaScript developer, video editing, UI/UX
Kareena Zaman Eula	T00719244	AI software developer (Python), mobile app development, machine learning, documentation

Open question: one personal interest or passion per member, to make the charter feel like us.

Our goals

We are aiming for a final project grade of **85% or higher**.

Beyond the grade, we both want this project to give us:

- **Real AWS system design skills:** designing and building cloud infrastructure end to end, which neither of us has done at this scale
- **A portfolio piece** we can show employers, with a clean GitHub repository and handbook
- **AWS certification prep**, using the eight phases as hands-on practice
- **Job interview material:** architecture decisions we can explain and defend with confidence

Skills and roles

Roles are fixed for the whole semester, but both of us work on every phase and must be able to explain all of it.

Member	Roles	Strengths we bring	What we want to learn
Ahsan	Team Lead, Submitter	JavaScript, full-stack web, video editing (Phase 8 walkthrough), UI/UX	AWS system design and infrastructure
Kareena	Timekeeper, Documentation Lead	Python, mobile apps, machine learning, technical writing	AWS system design and infrastructure

- **Team Lead:** keeps the phase plan on track and makes sure deadlines are met
- **Submitter:** submits every phase deliverable and the final handbook on Moodle
- **Timekeeper:** runs each meeting to time and makes sure both voices are heard
- **Documentation Lead:** owns the evidence folder and the structure of the final engineering handbook

Meetings and communication

We meet in person every **Tuesday and Thursday, 1:30 to 3:30 PM**, at [room or location to decide].

Item	Our rule
Main channel	iMessage group chat
Reply time	Within 4 to 8 hours
Notice for missing a meeting	At least 2 days ahead, by iMessage
Catching up after a missed meeting	Read the meeting notes and respond within 48 hours
Avoidably late	The late member buys the other a coffee
Unexcused absences	3 unexcused absences and we escalate to the instructor

Decisions, leadership and conflict

What leadership means to us: do what is good for the team and the goal.

Making decisions: [to decide: for example, we both agree, and if we can't, the Team Lead makes the call]

Resolving conflicts:

1. We talk it out openly at our next meeting.
2. If a member is treated disrespectfully, or we cannot resolve it ourselves, we bring it to the instructor.

How we work

- **Splitting work:** we build every phase together, and lean on each person's strengths for specific pieces.
- **Internal deadline:** all evidence for a phase is finished at least **1 day before** the official due date.
- **Where work lives:** infrastructure code in GitHub; evidence, screenshots and handbook drafts in Google Drive.
- **AI use:** we follow the SENG 4620 AI policy. We use AI freely for out-of-scope work (web pages, PHP, SQL) and as a tutor for cloud concepts and debugging. We do not use it to generate our infrastructure code, network design, diagrams or handbook writing. Each of us logs AI use as we go, so the final AI Usage Declaration is accurate, and anything AI touched is reviewed by both of us before submission.

How we celebrate

[to decide: how we mark finishing each phase, and the final submission]
